Project: –

HTML/CSS Project –

- **Fluid Responsive Design** – Created a comprehensive layout using CSS Media Queries from scratch, ensuring 100% responsiveness across mobile, tablet, and desktop without the use of external frameworks.
- **Grid & Flexbox Implementation** – Leveraged CSS Grid for complex page structures and Flexbox for alignment, resulting in a lightweight and highly maintainable codebase.
- **Performance Optimization** – Eliminating heavy framework dependencies, reduced the overall CSS bundle size, significantly improving page load speeds and core web Vitals.
- **Cross – Browser Consistency** – Implemented custom resets and styling to ensure a uniform user experience across all modern browsers.
- **Clean Code Architecture**- Applied a modular CSS approach to maintain scalability and organization within the project`s stylesheet.

HTML/CSS/JAVASCRIPT Project -

- **Responsive Design:** Implemented custom CSS media queries to ensure a seamless, mobile-first experience across all devices.
- **Dynamic Architecture:** Developed a scalable services section where content is rendered dynamically for easy updates.
- **Interactive Features:** Integrated functional Email.js for email handling for form submissions and incorporated scroll-triggered animations to enhance user engagement.
- **UI/UX:** Engineered a fully responsive layout using custom CSS for precise breakpoint control.
- **Motion:** Optimized site aesthetics with section-wise CSS/JavaScript animations.
